Hands on Weka: Part III
Classification rules and descriptive induction

Petra Kralj Novak

9.12.2014

Voting dataset

- 435 instances
- 16 attributes
  - 16 nominal attributes
 - 0 numeric attributes
- No target variable
- No missing values

Classification rules:
Weka → classifiers → rules → JRip
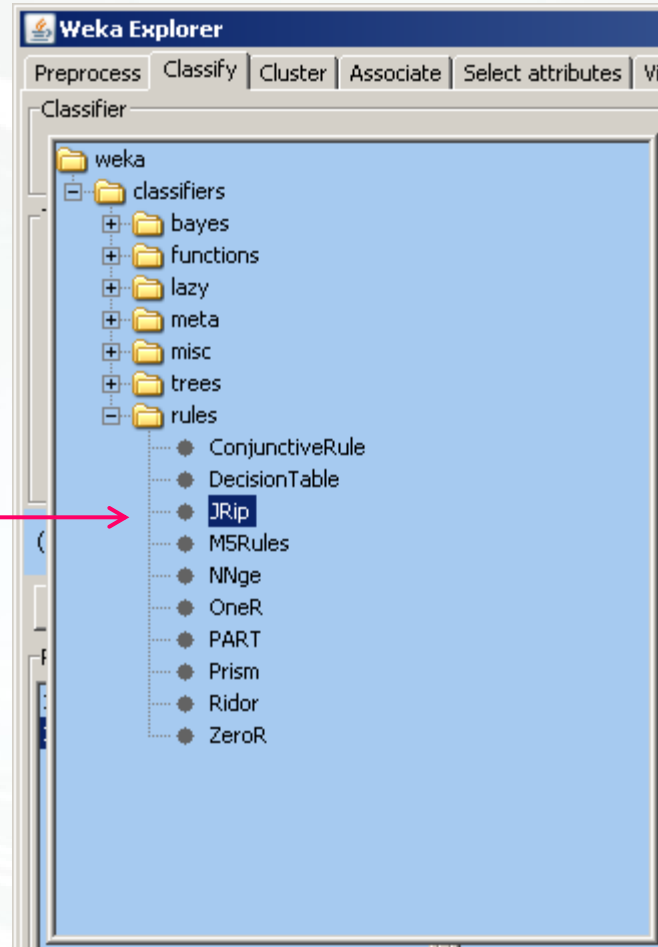

Baseline classifier:
Weka → classifiers → rules → ZeroR

Association rules
Weka → associations → Apriori

Quality of association rules
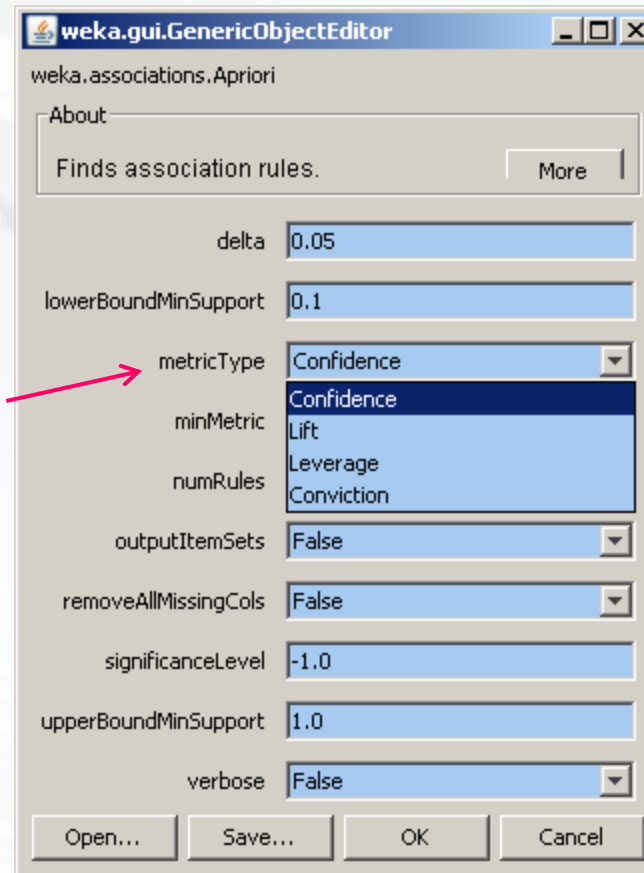

Compare classification and association rules

- Purpose
- Format
- Quality measure
- Ruleset / List of rules
- Exhaustiveness of algorithms

Comparison of classification and association rules

- Purpose
  - Classification rules: classification
  - Association rules: exploratory data analysis, descriptive induction
- Format
  - Both in the format X $\rightarrow$ Y
  - Classification rules: Y is a pair "target variable=class"
  - Association rules: both X and Y are itemsets $\cong$ conjunctions of attribute-value pairs
- Quality measure
  - Classification rules: classification accuracy of the ruleset, precision, rule accuracy, weighted relative accuracy
  - Association rules: support, confidence, lift, leverage, conviction
- Ruleset / List of rules
  - Classification rules: can be both: unordered sets of rules or ordered list of rules
  - Association rules: unordered set of rules
- Exhaustiveness of algorithms
  - Classification rules: heuristic algorithms
  - Association rules: exhaustive algorithms, guarantee the optimal results
